

# Federated Floating Rate Strategic Income Fund

Nasdaq Symbol — R6: FFRLX | IS: FFRSX | A: FRSAX | C: FRICX

## Product Highlights

- Pursues total return consistent with current income and low interest rate volatility.
- Invests primarily in a strategic mix of floating rate fixed-income investments, which pay interest at rates that increase or decrease with changes in market rates.
- Has broad flexibility to invest across a unique range of non-correlated floating rate sectors: U.S. non-investment grade (primarily floating-rate bank loans); U.S. investment grade (primarily adjustable rate mortgage-backed securities); and international (primarily floating-rate trade finance instruments).
- Management team strategically positions the fund in the most attractive floating rate sectors (up to 75% in any sector) and adjusts the sector mix and duration based on relative valuations and economic and market conditions.
- Provides an option to investors concerned with rising inflation, rising interest rates and longer-term credit risk.

Performance quoted represents past performance, which is no guarantee of future results. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than what is stated. To view performance current to the most recent month-end, and for after-tax returns, contact us or visit [FederatedInvestors.com](http://FederatedInvestors.com). Maximum Offering Price figures reflect the maximum sales charge of 2% for A Shares, and the maximum contingent deferred sales charge of 1% for C Shares. See the prospectus for other fees and expenses that apply to a continued investment in the fund.

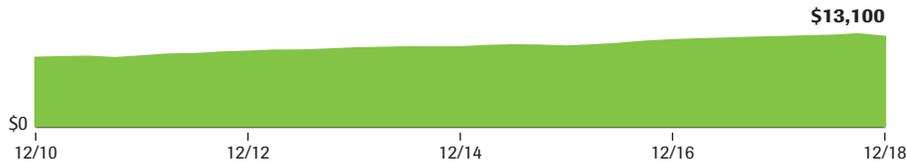

\* The fund's expense ratio is from the most recent prospectus. The expense ratio may reflect voluntary fee waivers and/or expense reimbursements determined by the fund's Advisor and its affiliates. The voluntary waivers and/or reimbursements, if applicable, are in effect up to but not including the later of 6/1/19 or the date of the fund's next effective prospectus.

# Federated Floating Rate Strategic Income Fund

## Growth Over Time

If you had invested \$10,000 in Institutional Shares on 12/31/10 (month end of the fund's performance inception) and reinvested all distributions, here's how your account would have grown by 12/31/18.

The fund's R6 Shares commenced operations on December 27, 2016. For the period prior to the commencement of operations of the R6 Shares, the performance information shown is for Institutional Shares. The performance of the Institutional Shares has not been adjusted to reflect the expenses applicable to the R6 since the R6 Shares have a lower expense ratio than the expense ratio of the Institutional Shares. The performance of the Institutional Shares has been adjusted to remove any voluntary waiver of the fund's expenses related to the Institutional Shares that may have occurred during the period prior to the commencement of operations of the R6 Shares.

The fund's C Shares commenced operations on September 6, 2013. For the period prior to the commencement of operations for the C Shares, the performance information shown is for the fund's Institutional Shares adjusted to reflect the expenses of the C Shares for each year for which the expenses of the fund's C Shares would have exceeded the actual expenses paid by the fund's Institutional Shares. The performance shown also has been adjusted to reflect differences between the sales loads and charges imposed on the purchase and redemption of the fund's Institutional Shares and C Shares.

The fund may invest in Federated Portfolios that are not available to the public and provide for more effective diversification than is available through the purchase of individual securities. Where applicable, the fund holdings reflect exposure to underlying securities held by the portfolios.

## A Word About Risk

Mutual funds are subject to risks and fluctuate in value. Bond prices are sensitive to changes in interest rates, and a rise in interest rates can cause a decline in their prices. High-yield, lower-rated securities generally entail greater market, credit/default and liquidity risks, and may be more volatile than investment-grade securities. International investing involves special risks including currency risk, increased volatility, political risks, and differences in auditing and other financial standards. The value of some mortgage-backed securities may be particularly sensitive to changes in prevailing interest rates, and although the securities are generally supported by some form of government or private insurance, there is no assurance that private guarantors or insurers will meet their obligations. Variable and floating-rate loans and securities generally are less sensitive to interest rate changes but may decline in value if their interest rates do not rise as much or as quickly as interest rates in general. Conversely, variable and floating-rate loans and securities generally will not increase in value as much as fixed-rate debt instruments if interest rates decline. In addition to the risks generally associated with debt instruments, such as credit, market, interest rate, liquidity and derivatives risks, bank loans are also subject to the risk that the value of the collateral securing a loan may decline, be insufficient to meet the obligations of the borrower, or be difficult to liquidate. Diversification does not assure a profit nor protect against loss.

## Definitions

The holdings percentages are based on net assets at the close of business on 12/31/18 and may not necessarily reflect adjustments that are routinely made when presenting net assets for formal financial statement purposes. Because this is a managed portfolio, the investment mix will change.

Total return represents the change in value of an investment after reinvesting all income and capital gains. Total return would have been lower in the absence of temporary expense waivers or reimbursements.

30-day yield (also known as "SEC yield") is a compounded and annualized figure calculated according to a formula set by the SEC. The formula requires use of a specific methodology for calculating dividends and interest earned, and expenses accrued, during the period, and reflects the maximum offering price per fund share. The standardized computation is designed to facilitate yield comparisons among different funds. For an indefinite period of time, the investment advisor is waiving all or part of its fee and, in addition, may reimburse the fund for some of its expenses. Otherwise, the yield would have been 5.14% for R6 Shares, 5.05% for Institutional Shares, 4.62% for A Shares, and 4.06% for C Shares.

Growth Over Time performance is for the fund's Institutional Shares. The fund offers additional share classes whose performance will vary due to differences in charges and expenses.

Weighted Average Effective Maturity is the average time to maturity of debt securities held in the fund.

Weighted Average Effective Duration (sometimes called "Option-Adjusted Duration") is a measure of a security's price sensitivity to changes in interest rates calculated using a model that recognizes that the probability of a bond being called or remaining outstanding until maturity may vary if market interest rates change, and that makes adjustments based on a bond's embedded options (e.g., call rights, or in the case of a mortgage-backed security, the probability that homeowners will prepay their mortgages), if any, based on the probability that the options will be exercised. A fund's weighted average effective duration will equal the market value weighted average of each bond's effective duration in the fund's portfolio. As with any model, several assumptions are made so the weighted average effective duration of a fund in the Federated family of funds may not be comparable to other funds outside of the Federated family of funds. Securities with longer durations are more sensitive to changes in interest rates than securities of shorter durations.

Weighted Average Bond Price - Morningstar generates this figure from the portfolio by weighting the price of each bond by its relative size in the portfolio. This number reveals if the manager favors bonds selling at prices above or below face value (discount or premium securities, respectively). A higher number indicates a bias toward premiums. This statistic is expressed as a percentage of par (face) value. Credit Suisse Leveraged Equity Index is an unmanaged market-weighted index designed to represent securities of the investable universe of the U.S. dollar denominated high yield debt market.

ICE 1-Month Libor or London Interbank Offered Rate, is the interest rate offered by a specific group of London banks for U.S. dollar deposits with a one-month maturity. ICE BofAML 1-Year U.S. Treasury Note Index is comprised of a single issue purchased at the beginning

*Investors should carefully consider the fund's investment objectives, risks, charges and expenses before investing. Please carefully read the summary prospectus or the prospectus before investing.*

*Past performance is no guarantee of future results.*

of the month and held for a full month. At the end of the month that issue is sold and rolled into a newly selected issue. The issue selected at each month-end rebalancing is the outstanding two-year Treasury note that matures closest to, but not beyond, one year from the rebalancing date. To qualify for selection, an issue must have settled on or before the month-end rebalancing date.

Indexes are unmanaged and cannot be invested in directly.

## Ratings and Rating Agencies

Morningstar Category identifies funds based on their actual investment styles as measured by their underlying portfolio holdings over the past three years. If the fund is less than three years old, the category is based on the life of the fund. ©2019 Morningstar, Inc. All Rights Reserved. The information contained herein: (1) is proprietary to Morningstar; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results.

The Morningstar Rating™ for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings do not take sales charges into account. Federated Floating Rate Strategic Income Fund was rated against the following numbers of U.S.-domiciled Bank Loan funds over the following time periods. Ratings are for A and Institutional Shares; other classes may have different performance characteristics. For the 3- and 5-year periods ended 12/31/18, the fund's A Shares received 3 and 3 stars and the fund's Institutional Shares received 3 and 4 stars, and was rated among 213 and 196 funds, respectively. Past performance is no guarantee of future results.

<sup>2</sup>The ratings agencies that provided the ratings are Standard and Poor's, Moody's and Fitch. When ratings vary, the highest rating is used. Credit ratings of A or better are considered to be high credit quality; credit ratings of BBB are good credit quality and the lowest category of investment grade; credit ratings BB and below are lower-rated securities ("junk bonds"); and credit ratings of CCC or below have high default risk. The credit quality breakdown does not give effect to the impact of any credit derivative investments made by the fund.
