

The small-cap growth universe is large, diverse and constantly changing. Federated Kaufmann Small Cap Fund's knowledgeable, experienced stock pickers seek out only those companies capable of exceptional, long-term growth.

Why Small Caps for Growth?

- Small companies are often innovators, willing to disrupt existing industries with the flexibility to adjust quickly as market conditions shift.
- Small companies are typically run by dedicated founders or a small team with big ideas and a passionate desire to succeed and increase shareholder value.
- Small caps offer access to niche growth opportunities—particularly in the fast-evolving tech, biotech and e-commerce areas.
- Small-cap stocks are often under-covered by Wall Street analysts, resulting in the high possibility of inefficient pricing and overlooked details. As solid companies grow and perform, the stocks gain more attention, increasing valuations.

A Word About Risk

Mutual funds are subject to risks and fluctuate in value.

International investing involves special risks including currency risk, increased volatility, political risks, and differences in auditing and other financial standards. Investing in IPOs involves special risks such as limited liquidity and increased volatility.

Small company stocks may be less liquid and subject to greater price volatility than large capitalization stocks.

Definitions

Total return represents the change in value of an investment after reinvesting all income and capital gains. Total return would have been lower in the absence of temporary expense waivers or reimbursements.

Active Share is a measure of the percentage of stock holdings in a manager's portfolio that differ from the benchmark index.

Russell 1000[®] Value Index measures the performance of the large-cap value segment of the U.S. equity universe. It includes those Russell 1000[®] Index companies with lower price-to-book ratios and lower expected growth values. The R1000V is constructed to provide a comprehensive and unbiased barometer for the large-cap value segment. The Russell 1000[®] Value Index is completely reconstituted annually to ensure new and growing equities are included and that the represented companies continue to reflect value characteristics.

Russell 2000[®] Growth Index measures the performance of the small-cap growth segment of the U.S. equity universe. It includes those Russell 2000[®] Index companies with higher price-to-value ratios and higher forecasted growth values. The Russell 2000[®] Growth Index is constructed to provide a comprehensive and unbiased barometer for the small-cap growth segment. The Index is completely reconstituted annually to ensure larger stocks do not distort the performance and characteristics of the true small-cap opportunity set and that the represented companies continue to reflect growth characteristics.

Morningstar Category identifies funds based on their actual investment styles as measured by their underlying portfolio holdings over the past three years. The Morningstar Rating[™] for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings do not take sales charges into account. Federated Kaufmann Small Cap Fund was rated against the following numbers of U.S.-domiciled Small Growth funds over the following time periods. Ratings are for A, R6 and Institutional Shares; other classes may have different performance characteristics. For the 3-, 5- and 10-year periods ended 3/31/19, the fund's A Shares received 5, 5 and 5 stars, the fund's Institutional Shares received 5, 5 and 5 stars and the fund's R6 Shares received 5, 5 and 5 stars, and was rated among 588, 522 and 392 funds, respectively.
