

Overview

Federated Hermes MDT approach:

- Investment process crafted over 30+ years
- Built upon exhaustive daily data spanning multiple market cycles
- Quantitative approach to stock selection utilizes cutting edge research, technology and data
- More than 25,000 domestic companies included (no survivorship bias)
- Core and style-specific strategies, built from the bottom-up, to build or complement traditional portfolio structures
- Diversified portfolios—by company type, sector exposure and number of holdings

Investment process

Our bottom-up process evaluates companies according to fundamental and technical factors that measure a company's growth/sentiment, value and quality characteristics. Our particular strength is choosing companies with specific combinations of characteristics that we believe can predict outperformance.

Explanatory factors

Value	Growth/sentiment	Quality
Fundamentally based valuation factors	Forward-looking estimates, price trends	Balance sheet quality, cash flows

Federated Hermes MDT Advisers

Strategy matrix

Our repeatable proprietary stock selection process is applied to each strategy.

Alpha shows how much or how little return is generated, given the risk a portfolio takes. A portfolio with an alpha greater than 0 has earned more than expected given its beta - meaning the portfolio has generated excess return without increasing risk. A portfolio with a negative alpha is producing a lower return than would be expected given its risk.

Mutual funds are subject to risks and fluctuate in value.

Bond prices are sensitive to changes in interest rates, and a rise in interest rates can cause a decline in their prices.

High-yield, lower-rated securities generally entail greater market, credit/default and liquidity risks, and may be more volatile than investment grade securities.

Small company stocks may be less liquid and subject to greater price volatility than large capitalization stocks.

Mid-capitalization companies often have narrower markets and limited managerial and financial resources compared to larger and more established companies.

The quantitative models and analysis used by the funds may perform differently than expected and negatively affect fund performance.

Diversification does not assure a profit nor does it protect against loss.

Separately managed accounts are available through MDT Advisers, a registered investment advisor.
