Fund Description

The fund pursues income and long-term capital appreciation by investing primarily in companies based outside the U.S., with a focus on high dividend-paying stocks with dividend growth potential. It seeks to provide a substantially higher yield than the broad international market.

Highlights

- Federated International Strategic Value Dividend Fund provided a 30-day SEC yield of 4.37% (A Shares at MOP) and a gross weighted average dividend yield of 5.75% at quarter end
- This was well ahead of the 3.62% weighted average yield provided by the MSCI World ex-U.S. Index and also exceeded the 5.49% yield provided by the fund's benchmark, the MSCI World ex-U.S. High Dividend Yield Index
- Highlights from the period included a 10.0% dividend increase from Canadian midstream energy holding Enbridge, a 9.1% raise from German apartment REIT Vonovia and an 8.7% dividend increase from Australian infrastructure holding Sydney Airport
- For the rolling one-year period, 36 companies raised their dividends, accounting for 38 increases overall and one special dividend
- The strategy's return in the fourth quarter exceeded that of the S&P 500, as investors favored defensive investments in a backdrop of heightened volatility and weaker stock prices

Looking Back

While returns across the major global equity indices were broadly negative in during the quarter, foreign equities held up slightly better than their U.S. counterparts. For the quarter, the MSCI World ex-U.S. index generated a return of -12.78% while the S&P 500 returned -13.52%. While no sector within the international broad market index delivered positive returns during this period, non-cyclical sectors such as Utilities, Real Estate, Communications Services and Consumer Staples provided the best sources of defense.

Performance

For the quarter, Federated International Strategic Value Dividend Fund generated a total return of -7.44% (A Shares at NAV). This compares to a return of -10.57% for the fund's benchmark, the MSCI World ex-U.S. High Dividend Yield Index, and a -12.78% return for the broad-based MSCI World ex-U.S. Index. With the fund's investments in the dividend income-producing segment of the international market, and its 3-year beta versus the MSCI World ex-U.S. Index of 0.66, the strategy's short-term returns are not expected to move in line with the broad market.

Performance Contributors

- Low-beta and high-yielding equities dramatically outperformed high-beta and low-yielding stocks in the period
- The fund's investments in Real Estate (1.00% ending weight) and Utilities (21.08% ending weight) contributed the quarter's strongest performance, with weighted average returns of 9.65% and 1.35%, respectively
- The fund's top-performing holding was Brazilian-based Telefonica Brasil, which contributed a 24.40% total return

Performance Detractors

- The fund's Consumer Staples holdings (12.27% ending weight) declined in the period, generating a weighted average return of -15.11%. Tobacco holding British American Tobacco led to the downside, returning -29.55 as the FDA sought to reduce the availability of flavored tobacco products, including menthol
- The portfolio's Energy holdings (10.94% ending weight) also declined sharply in the quarter, contributing a weighted average return of -12.10%
- The fund's Industrials holdings (2.51% ending weight) underperformed in the period, with a weighted average return of -15.97%

Performance quoted represents past performance, which is no guarantee of future results. Current performance may be lower or higher than what is stated. To view performance current to the most recent month-end, and for after-tax returns, contact us or visit FederatedInvestors.com.

How We Are Positioned

Looking forward, while the portfolio's holdings are expected to continue to announce organic dividend increases in their local currencies that are consistent with the fund's dividend growth mandate, the strengthening of the U.S. dollar that was observed in 2018 represents a headwind to the fund's overall dividend growth outlook in 2019.

While macroeconomic data points can impact share price movements in the near term, Federated International Strategic Value Dividend Fund remains committed to its focus on long term drivers of total return: Dividend yield and dividend growth. To pursue those goals, the portfolio remains concentrated in Consumer Staples, Integrated Energy, Health Care Pharmaceuticals, Telecom Services, Utilities and high-quality Banks and Insurers. These segments of the economy contain the type of high-quality dividend-friendly stocks that the portfolio seeks out, enabling the strategy to provide investors with the opportunity for a high dividend yield complemented with dividend growth. That dividend growth can help the fund both sustain its high yield and outpace inflation. Such investments also tend to be less volatile than the broad market, offering lower downside risk characteristics for the portfolio.

30-day yield (also known as "SEC yield") is a compounded and annualized figure calculated according to a formula set by the SEC. The formula requires use of a specific methodology for calculating dividends and interest earned, and expenses accrued, during the period, and reflects the maximum offering price per fund share. The standardized computation is designed to facilitate yield comparisons among different funds. In the absence of temporary expense waivers or reimbursements, the 30-day yield would have been 4.67% for R6 Shares, 4.66% for Institutional Shares, and 4.16% for A Shares.

The 12-month yield is the sum of a fund's total trailing 12-month interest and dividend payments divided by the last month's ending share price (NAV) plus any capital gains distributed over the same period.

The fund's R6 Shares commenced operations on January 27, 2017. For the period prior to the commencement of operations of the R6 Shares, the performance information shown is for Institutional Shares, adjusted to remove any voluntary waiver of fund expenses related to the fund's Institutional Shares that occurred during the period prior to the commencement of operations of the fund's R6 Shares.

A Word About Risk

Mutual funds are subject to risks and fluctuate in value.

There are no guarantees that dividend-paying stocks will continue to pay dividends. In addition, dividend-paying stocks may not experience the same capital appreciation potential as non-dividend-paying stocks.

Because the fund may allocate relatively more assets to certain industry sectors than others, the fund's performance may be more susceptible to any developments which affect those sectors emphasized by the fund.

International investing involves special risks, including currency risk, increased volatility, political risks, and differences in auditing and other financial standards.

Definitions

MSCI World ex U.S. High Dividend Yield Index is based on the MSCI World ex U.S. Index, its parent index, and includes large- and mid-cap stocks across 22 of 23 Developed Markets countries. The index is designed to reflect the performance of equities in the parent index (excluding REITs) with higher dividend income and quality characteristics than average dividend yields that are both sustainable and persistent. The index also applies quality screens and reviews 12-month past performance to omit stocks with potentially deteriorating fundamentals that could force them to cut or reduce dividends.

MSCI World ex U.S. Index captures large- and mid-cap representation across 22 of 23 Developed Markets countries—excluding the United States. The index covers approximately 85% of the free float-adjusted market capitalization in each country.

Indexes are unmanaged and cannot be invested in directly.

Beta measures a portfolio's volatility relative to the market. A Beta greater than 1.00 suggests the portfolio has historically been more volatile than the market as measured by the fund's benchmark. A Beta less than 1.00 suggests the portfolio has historically had less volatility relative to the market.

Correlation is the degree to which one variable (here, the fund's returns) fluctuates relative to another (the returns of the fund's benchmark). Correlation ranges from 1.00, when two variables move identically in the same direction, to -1.00, when two variables move identically in the opposite direction.

Median 3 Year Average Payout Ratio is the proportion of earnings paid out as dividends to shareholders, typically expressed as a percentage.

Standard Deviation is a historical measure of the variability of returns relative to the average annual return. A higher number indicates higher overall volatility.

Up Capture Ratio/Down Capture Ratio is a measure of how well a manager was able to replicate or improve on periods of positive benchmark returns, and how badly the manager was affected by periods of negative benchmark returns. The up-market capture ratio is a measure of a manager's performance in up markets relative to the index during the same period. For example, a ratio value of 115 indicates that the manager has outperformed the market index by 15% in periods when the index has risen. The down-market capture ratio is the direct opposite of the up-market capture ratio, gauging performance of the manager relative to the index in down markets. A ratio value of 80 would indicate the manager had declined on 80% as much as the declining overall market, indicating relative outperformance.

Weighted Average Dividend Yield is a weighted average of the dividends of all the stocks in a portfolio.

Weighted Median Market Cap is the calculation representing the median market capitalization of the stocks in the portfolio, weighted by the amount of each stock.

Weighted Median P/E (NTM—Next 12 Months) is a ratio comparing share price to earnings per share using estimated data for the next 12 months.

Weighted Median Price/Book is a ratio comparing share price to book value or assets minus liabilities.

Weighted Average EPS Growth Next 5 Years is the weighted average annual growth rate of fiscal year earnings per share for the next five years for a given corporation.
