Fund Description

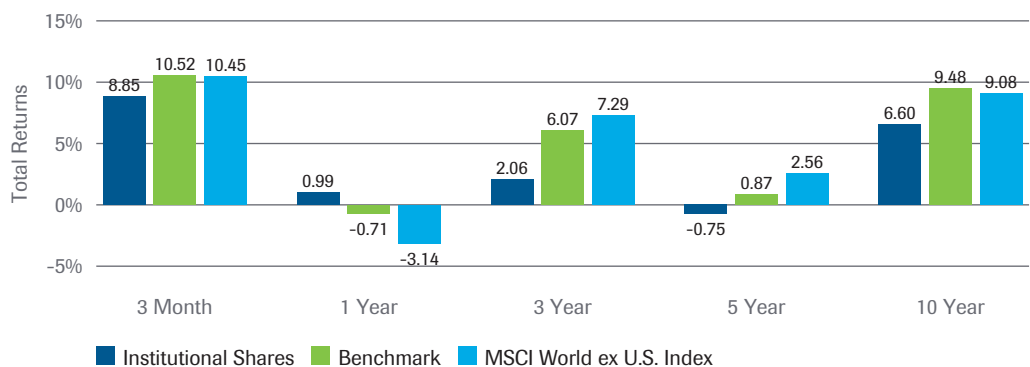

The fund pursues income and long-term capital appreciation by investing primarily in companies based outside the U.S., with a focus on high dividend-paying stocks with dividend growth potential. It seeks to provide a substantially higher yield than the broad international market.

Portfolio composition is based on net assets at the close of business on 3/31/19 and may not necessarily reflect adjustments that are routinely made when presenting net assets for formal financial statement purposes. Because this is a managed portfolio, the investment mix will change.

Highlights

- Federated International Strategic Value Dividend Fund provided a 30-day SEC yield of 4.13% (A Shares at MOP) and a gross weighted average dividend yield of 5.35% at quarter end
- This was well ahead of the 3.42% weighted average yield provided by the MSCI World ex-U.S. Index and also exceeded the 5.08% yield provided by the fund's benchmark, the MSCI World ex-U.S. High Dividend Yield Index
- During the quarter 18 fund holdings announced dividend increases
- Notable increases included Australia's AGL Energy (13.5%), Italgas (12.5%), TransCanada (8.7%), Munich Re (7.6%) and a 6.1% hike from both Scor and Enel
- For the rolling one-year period, 38 companies in the portfolio raised their dividends, accounting for 40 increases overall, and one special dividend

Looking Back

While the major global equity indices rallied in the quarter, foreign equities underperformed their U.S. counterparts during the period. For the first quarter of 2019, the MSCI World ex-U.S. Index generated a return of 10.45% while the S&P 500 returned 13.65%. The S&P 500's rise for the year's first three months was its best quarterly performance since 2009. Overseas, the MSCI World Ex-US Index closed down slightly in March, with weakness centered in Europe.

As the quarter drew to a close, investors' emerging appetite for risk was evident as the highest-beta quintile of the broad-based MSCI World ex-U.S. index outperformed the lowest-beta quintile by 781 basis points. Investors' near-term risk acceptance also included a shift away from income-producing equities, as the highest-yielding quintile of the broad market index underperformed the lowest-yielding quintile by 154 basis points.

Performance

For the first quarter of 2019, Federated International Strategic Value Dividend Fund generated a total return of 9.13% (A Shares at NAV). This compares to a return of 10.52% for the fund's benchmark, the MSCI World ex-U.S. High Dividend Yield Index, and a 10.45% return for the broad-based MSCI World ex-U.S. Index. With the fund's investments in the dividend-income-producing segment of the international market, and its 3-year beta versus the MSCI World ex-U.S. Index of 0.76, the strategy's short-term returns are not expected to move in line with the broad market.

Performance Contributors

- Canada (21.45% ending weight) delivered the portfolio's largest country contribution in the quarter with a weighted average return of 15.60% driven by TransCanada, Enbridge and Emera, which returned 27.20%, 18.22% and 18.14%, respectively
- By sector, the fund's investments in Consumer Staples (12.52% ending weight) and Energy (12.65% ending weight) contributed strong performance in the quarter, with weighted average returns of 20.80% and 17.29% each
- Utilities (18.74% ending weight) were also a strong contributor in the quarter with a weighted average return of 13.13

Performance Detractors

- Sweden (1.44% ending weight) delivered the fund's weakest country performance as Swedbank and SEB returned -25.51% and -5.04% each after concerns arose regarding potential anti-money laundering violations in the banks' Baltic branches
- Information Technology (0.87% ending weight) delivered the portfolio's weakest sector performance, as Brazil's Cielo returned -12.56
- Other detractors included Scor and Vodafone which returned -5.37% and -6.45% each

Performance quoted represents past performance, which is no guarantee of future results. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than what is stated. To view performance current to the most recent month-end, and for after-tax returns, contact us or visit FederatedInvestors.com.

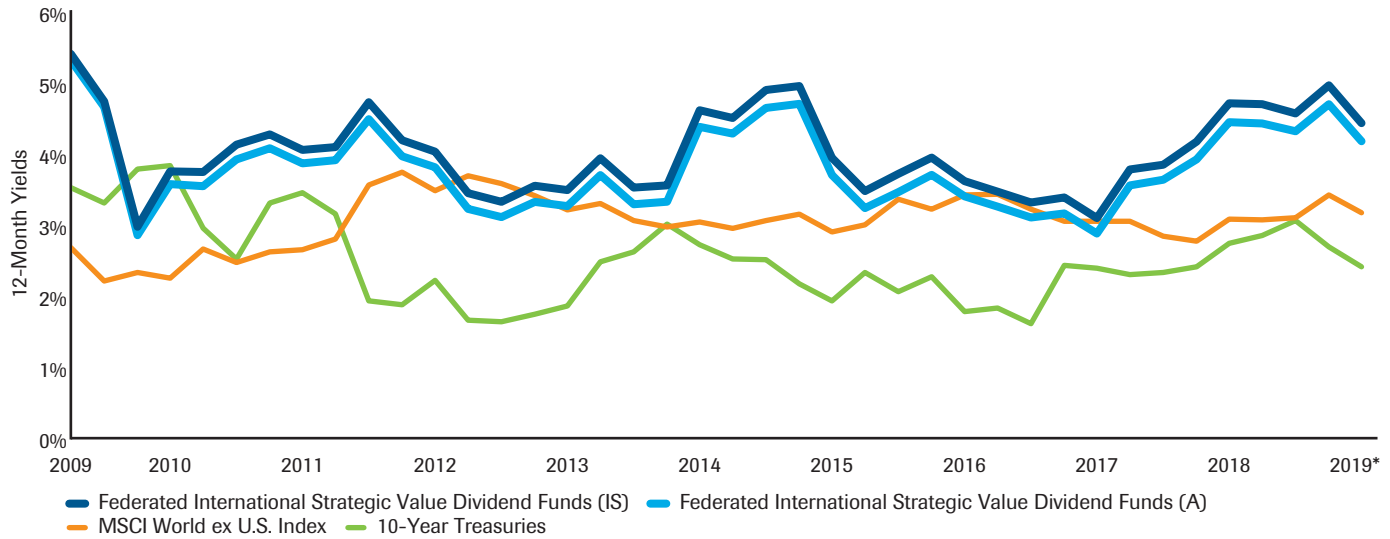

How We Are Positioned

Looking forward, while the fund's holdings are expected to continue to announce organic dividend increases in their local currencies that are consistent with the strategy's dividend growth mandate, the strengthening of the U.S. dollar that was observed in 2018 represents a headwind to the portfolio's overall dividend growth outlook in 2019.

While macroeconomic data points can impact share price movements in the near term, Federated International Strategic Value Dividend Fund remains committed to its focus on long-term drivers of total return: dividend yield and dividend growth. To pursue those goals, the portfolio remains concentrated in Consumer Staples, Integrated Energy, Health Care Pharmaceuticals, Telecom Services, Utilities and high-quality Banks and Insurers. These segments of the economy contain the type of high-quality dividend-friendly stocks that the portfolio seeks out, enabling the strategy to provide investors with the opportunity for a high dividend yield complemented with dividend growth. That dividend growth can help the fund both sustain its high yield and outpace inflation. Such investments also tend to be less volatile than the broad market, offering lower downside risk characteristics for the portfolio.

30-day yield (also known as “SEC yield”) is a compounded and annualized figure calculated according to a formula set by the SEC. The formula requires use of a specific methodology for calculating dividends and interest earned, and expenses accrued, during the period, and reflects the maximum offering price per fund share. The standardized computation is designed to facilitate yield comparisons among different funds. In the absence of temporary expense waivers or reimbursements, the 30-day yield would have been 4.49% for R6 Shares, 4.48% for Institutional Shares, and 3.95% for A Shares.

The 12-month yield is the sum of a fund’s total trailing 12-month interest and dividend payments divided by the last month’s ending share price (NAV) plus any capital gains distributed over the same period.

The fund’s R6 Shares commenced operations on January 27, 2017. For the period prior to the commencement of operations of the R6 Shares, the performance information shown is for Institutional Shares, adjusted to remove any voluntary waiver of fund expenses related to the fund’s Institutional Shares that occurred during the period prior to the commencement of operations of the fund’s R6 Shares.

A Word About Risk

Mutual funds are subject to risks and fluctuate in value.

There are no guarantees that dividend-paying stocks will continue to pay dividends. In addition, dividend-paying stocks may not experience the same capital appreciation potential as non-dividend-paying stocks.

Because the fund may allocate relatively more assets to certain industry sectors than others, the fund’s performance may be more susceptible to any developments which affect those sectors emphasized by the fund. International investing involves special risks, including currency risk, increased volatility, political risks, and differences in auditing and other financial standards.

Definitions

MSCI World ex U.S. High Dividend Yield Index is based on the MSCI World ex U.S. Index, its parent index, and includes large- and mid-cap stocks across 22 of 23 Developed Markets countries. The index is designed to reflect the performance of equities in the parent index (excluding REITs) with higher dividend income and quality characteristics than average dividend yields that are both sustainable and persistent. The index also applies quality screens and reviews 12-month past performance to omit stocks with potentially deteriorating fundamentals that could force them to cut or reduce dividends.

MSCI World ex U.S. Index captures large- and mid-cap representation across 22 of 23 Developed Markets countries—excluding the United States. The index covers approximately 85% of the free float-adjusted market capitalization in each country.

Indexes are unmanaged and cannot be invested in directly.

Beta measures a portfolio’s volatility relative to the market. A Beta greater than 1.00 suggests the portfolio has historically been more volatile than the market as measured by the fund’s benchmark. A Beta less than 1.00 suggests the portfolio has historically had less volatility relative to the market.

Correlation is the degree to which one variable (here, the fund’s returns) fluctuates relative to another (the returns of the fund’s benchmark). Correlation ranges from 1.00, when two variables move identically in the same direction, to -1.00, when two variables move identically in the opposite direction.

Median 3 Year Average Payout Ratio is the proportion of earnings paid out as dividends to shareholders, typically expressed as a percentage.

Standard Deviation is a historical measure of the variability of returns relative to the average annual return. A higher number indicates higher overall volatility.

Up Capture Ratio/Down Capture Ratio is a measure of how well a manager was able to replicate or improve on periods of positive benchmark returns, and how badly the manager was affected by periods of negative benchmark returns. The up-market capture ratio is a measure of a manager’s performance in up markets relative to the index during the same period. For example, a ratio value of 115 indicates that the manager has outperformed the market index by 15% in periods when the index has risen. The down-market capture ratio is the direct opposite of the up-market capture ratio, gauging performance of the manager relative to the index in down markets. A ratio value of 80 would indicate the manager had declined on 80% as much as the declining overall market, indicating relative outperformance.

Weighted Average Dividend Yield is a weighted average of the dividends of all the stocks in a portfolio.

Weighted Median Market Cap is the calculation representing the median market capitalization of the stocks in the portfolio, weighted by the amount of each stock.

Weighted Median P/E (NTM—Next 12 Months) is a ratio comparing share price to earnings per share using estimated data for the next 12 months.

Weighted Median Price/Book is a ratio comparing share price to book value or assets minus liabilities.

Weighted Average EPS Growth Next 5 Years is the weighted average annual growth rate of fiscal year earnings per share for the next five years for a given corporation.
