Fund description

The fund pursues capital appreciation by investing in a diversified portfolio of U.S. mid-cap companies from the Russell Midcap Growth Index. Through a fundamentally based, bottom up, systematic approach, it seeks to remove subjective and emotional influences from the stock-selection process.

Performance quoted represents past performance, which is no guarantee of future results. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than what is stated. To view performance current to the most recent month-end, and for after-tax returns, contact us or visit FederatedInvestors.com. Maximum offering price figures reflect the maximum sales charge of 5.5% for A Shares. See the prospectus for other fees and expenses that apply to a continued investment in the fund. Total returns for periods of less than one year are cumulative.

* The fund's expense ratio is from the most recent prospectus. The expense ratio may reflect voluntary fee waivers and/or expense reimbursements determined by the fund's Advisor and its affiliates. The voluntary waivers and/or reimbursements, if applicable, are in effect up to but not including the later of 1/1/21 or the date of the fund's next effective prospectus.

Investment process

Fundamentally based research

Research identifies powerful combinations of classic fundamentals enhanced with behavioral signals that work across market environments.

Stock selection

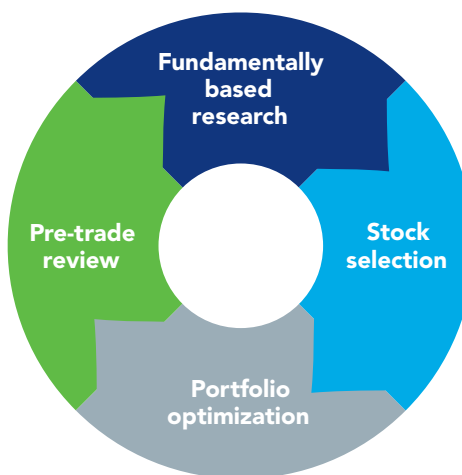

Stock alphas are forecasted based on each company's characteristics.

Portfolio optimization

Proprietary software is used to maximize portfolio alpha, net of trading costs, while managing risk.

Pre-trade review

All trades are reviewed to ensure they are based on the most recent and accurate information. Insights from pre-trade review provide important feedback to the team and inspire further research.

Sector weightings (%)

Portfolio composition is based on net assets at the close of business on 6/30/20 and may not necessarily reflect adjustments that are routinely made when presenting net assets for formal financial statement purposes. Because this is a managed portfolio, the investment mix will change.

Highlights

- Midcap growth stocks outperformed midcap value stocks
- Stock selection among high volatility stocks contributed most to outperformance
- Fund ended quarter roughly sector-neutral to benchmark

Looking back

During the second quarter of 2020, the domestic stock market appreciated substantially, even as the extent of the coronavirus pandemic was coming to light. The Russell 3000 returned 22.03% versus the prior quarter's loss of 20.90%, leaving its year-to-date return at -3.48%, a much smaller loss than at the end of the first quarter. Just as in the first quarter, growth stocks fared better than value stocks. The Russell 3000 Growth Index returned 27.99% while the Russell 3000 Value Index returned only 14.55%, and all other Russell Growth Indexes beat their Value counterparts by a similar margin.

While the mega-cap Russell Top 200 Index lost far less money last quarter than did the midcap and small-cap indexes, its second-quarter return of 20.91% trailed both the Russell Midcap Index's 24.61% and the small-cap Russell 2000 Index's 25.42%. Year-to-date, however, the Russell Top 200 Index has returned 11.20%, well ahead of the midcap index at -9.13% and the small-cap index at -12.98%.

Performance of MDT funds was strong in the second quarter, both in absolute terms and versus their benchmarks. There were some gems to be had at the bottom of the market, stocks that took a severe hit to price in the first quarter but still had relatively strong fundamental characteristics. These are what we call our "deep value" picks (even though some of them are actually growth stocks), and they performed well this quarter.

Performance

Federated Hermes MDT Mid Cap Growth Fund Institutional Shares returned 32.97% in the second quarter of 2020, outperforming the 30.26% return of its benchmark, the Russell Midcap Growth Index.

Performance contributors

- Strong stock selection among stocks with high volatility
- Favorable stock selection and an overweight of stocks with depressed prices and flat or improving earnings-to-price
- Security selection in Industrials, Health Care and Materials sectors
- Strong performers overweighted by the fund: DocuSign, Inc., Norwegian Cruise Line Holdings Ltd., Hologic, Inc. and Cadence Design Systems, Inc.

Performance detractors

- Security selection in Communication Services sector
- Strong performers underweighted by the fund: Lululemon Athletica Inc., Twilio, Inc. (Class A) and Spotify Technology SA

Performance quoted represents past performance, which is no guarantee of future results. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than what is stated. To view performance current to the most recent month-end, and for after-tax returns, contact us or visit FederatedInvestors.com.

How we are positioned

The fund ended the second quarter roughly sector-neutral to the benchmark, according to the GICS sectors, although there were small underweights in Health Care and Communications Services sectors and a small overweight in Consumer Discretionary. Within the sectors, there was a significant overweight position in the capital goods industry and a smaller overweight position in the software & services industry. There was a significant underweight position in the health care equipment & services industry and small underweight positions in the media & entertainment and in food, beverage & tobacco industries.

Federated Hermes MDT Mid Cap Growth Fund

Investors should carefully consider the fund's investment objectives, risks, charges and expenses before investing. To obtain a summary prospectus or a prospectus containing this and other information, contact us or visit FederatedInvestors.com. Please carefully read the summary prospectus or the prospectus before investing.

As of June 29, 2020, the fund was renamed Federated Hermes MDT Mid Cap Growth Fund.

The fund's Institutional Shares commenced operations on January 29, 2010. For the period prior to the commencement of operations for the Institutional Shares, the performance information shown is for the fund's A Shares. The performance of the A Shares has not been adjusted to reflect the expenses of the Institutional Shares since the Institutional Shares have a lower expense ratio than the expense ratio of the A Shares. The performance of the A Shares has been adjusted to remove any voluntary waiver of the fund's expenses related to the A Shares that may have occurred during the period prior to the commencement of operations of the Institutional Shares. The performance information shown also has been adjusted to reflect the absence of sales charges applicable to the A Shares.

The fund's R Shares, re-designated as R6 Shares on September 1, 2016, commenced operations on December 12, 2006. For the period prior to the commencement of operations of the R Shares (now known as R6 Shares), the performance information shown is for the fund's A Shares, adjusted to reflect the expenses of the R Shares, and the performance information shown for the R6 Shares prior to September 1, 2016 reflects the higher R Shares expenses. The performance information shown also has been adjusted to reflect the absence of sales charges applicable to the A Shares. See the prospectus for other fees and expenses that apply to a continued investment in the fund.

A word about risk

Mutual funds are subject to risks and fluctuate in value.

Mid-capitalization companies often have narrower markets and limited managerial and financial resources compared to larger and more established companies.

The quantitative models and analysis used by the fund may perform differently than expected and negatively affect fund performance.

Definitions

Russell Midcap® Growth Index measures the performance of the mid-cap growth segment of the U.S. equity universe. It includes those Russell Midcap® Index companies with higher price-to-book ratios and higher forecasted growth values. The Russell Midcap® Growth Index is constructed to provide a comprehensive and unbiased barometer of the mid-cap growth market. The Index is completely reconstituted annually to ensure larger stocks do not distort the performance and characteristics of the true mid-cap growth market.

S&P 500 Index is an unmanaged capitalization-weighted index of 500 stocks designated to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries.

Indexes are unmanaged and cannot be invested in directly.

Alpha shows how much or how little return is generated, given the risk a portfolio takes. A portfolio with an alpha greater than 0 has earned more than expected given its beta—meaning the portfolio has generated excess return without increasing risk. A portfolio with a negative alpha is producing a lower return than would be expected given its risk.

Beta measures a portfolio's volatility relative to the market. A beta greater than 1.00 suggests the portfolio has historically been more volatile than the market as measured by the fund's benchmark. A beta less than 1.00 suggests the portfolio has historically had less volatility relative to the market.

Correlation is the degree to which one variable (here, the fund's returns) fluctuates relative to another (the returns of the fund's benchmark). Correlation ranges from 1.00, when two variables move identically in the same direction, to -1.00, when two variables move identically in the opposite direction.

R-squared indicates what percentage of a portfolio's movement in performance is explained by movement in performance of the market. R-squared ranges from 0 to 100, and a score of 100 suggests that all movements of a portfolio's performance are completely explained by movements in the market as measured by the fund's benchmark.

Sharpe ratio is calculated by dividing a fund's annualized excess return by the fund's annualized standard deviation. The higher the Sharpe ratio, the better the fund's historical risk adjusted performance.

Standard deviation is a historical measure of the variability of returns relative to the average annual return. A higher number indicates higher overall volatility.

Tracking error is the difference between a portfolio's returns and the benchmark or index it was meant to mimic or beat.

Up capture ratio/down capture ratio is a measure of how well a manager was able to replicate or improve on periods of positive benchmark returns and how badly the manager was affected by periods of negative benchmark returns. The up-market capture ratio is a measure of a manager's performance in up markets relative to the index during the same period. For example, a ratio value of 115 indicates that the manager has outperformed the market index by 15% in periods when the index has risen. The down-market capture ratio is the direct opposite of the up-market capture ratio, gauging performance of the manager relative to the index in down markets. A ratio value of 80 would indicate the manager had declined on 80% as much as the declining overall market, indicating relative outperformance.

Weighted median price/book is a ratio comparing share price to book value or assets minus liabilities.

Weighted median market cap is the calculation representing the median market capitalization of the stocks in the portfolio, weighted by the amount of each stock.

Weighted median P/E (LTM—latest 12 months) is a ratio comparing share price to earnings per share using data from the previous 12 months.

Weighted median P/E (NTM—next 12 months) is a ratio comparing share price to earnings per share using estimated data for the next 12 months.
