Economic and Market Commentary: Extra Innings

May 1, 2024

The Federal Reserve has had the markets running on a treadmill for several months. The despairing tone of the statement from the May 1 Federal Open Market Committee (FOMC) meeting indicates we won't step off anytime soon: "In recent months, there has been a lack of further progress toward the Committee's 2% inflation objective." Goes almost without saying that the target fed funds range remained at 5.25-5.5%.

But a better analogy is that we have entered extra innings in the game against inflation. It just won't give up. But despite the recent disappointing Consumer Price Index (CPI) and the Personal Consumption Expenditures (PCE) index readings, Chair Jerome Powell said yesterday he still expects price pressures to decline this year and that the Fed will cut rates eventually. (He seems plenty confident in that despite constantly saying he lacks confidence). In our view, the U.S. economy isn't moving backward or running in place, but simply in overtime in a game in which cash remains king. Two cuts are likely the most we will get this year.

This makes investing tricky. Moving out of liquidity vehicles too soon might mean losing out on yield if the contest stretches on; but waiting to extend the duration of a portfolio until the

**Definition of Weighted Average Maturity and Weighted Average Life

WAM is the mean average of the periods of time remaining until the securities held in TexPool (a) are scheduled to be repaid, (b) would be repaid upon a demand by TexPool, or (c) are scheduled to have their interest rate readjusted to reflect current market rates. Securities with adjustable rates payable upon demand are treated as maturing on the earlier of the two dates set forth in (b) and (c) if their scheduled maturity is 397 days or less; and the later of the two dates set forth in (b) and (c) if their scheduled maturity is more than 397 days. The mean is weighted based on the percentage of the amortized cost of the portfolio invested in each period.

WAL is calculated in the same manner as WAM, but is based solely on the periods of time remaining until the securities held in TexPool (a) are scheduled to be repaid or (b) would be repaid upon a demand by TexPool, without reference to when interest rates of securities within TexPool are scheduled to be readjusted.

first cut can lead to the same. We are sticking to our game plan of keeping our weighted average maturities long as we seek higher-yielding securities and paper further out the yield curve. This is no time to let up.

Tapering plans revealed

A game within the policy game has been the Fed's steady reduction of its balance sheet, which grew from huge to colossal during the pandemic. Since June of 2022, it has allowed \$60 billion of Treasuries and \$35 billion of mortgage-backed securities (MBS) to mature without replacing them. At its May 1 meeting, the FOMC announced it would taper this amount starting in June by lowering the monthly cap on Treasuries from \$60 billion to \$25 billion, while keeping the MBS cap at \$35 billion. The Fed is keen to get out of the mortgage sector, so the status quo there was expected. It was good to hear Powell say the Fed is tapering gradually to minimize the chance the money markets experience stress. We are all for that.

At the end of the month, yields on 1-, 3-, 6- and 12-month U.S. Treasuries were 5.36%, 5.39%, 5.38% and 5.24%, respectively.

90-Day Treasury Bill is a short-term debt instrument backed by the national government. These are used to collect immediate cash to meet outstanding obligations.

Any private investor can invest in a Treasury bill. The 90-Day Treasury Bill is a weighted average rate of the weekly auctions of 90-Day Treasury Bills.

Past performance is no guarantee of future results.
